

International Workshop on Disordered Systems - IWDS10

The **International Workshop on Disordered Systems** is a meeting gathering people from different skills and communities, theoreticians and experimentalists, having as common research activity disorder systems. This meeting has been held with great success every two years starting in 1998 (Arica, Chile) and the last two times in Benasque, Spain and San Antonio, Texas.

This year the workshop will be centered on the following topics:

- Quantum transport in nanosystems and application to biological systems
- Quantum dynamics in many body systems
- Non Hermitian Physics and open quantum system
- Transport and localization in disordered system

Organization

Fausto Borgonovi (chair)

Department of Mathematics and Physics, Università Cattolica, Italy
Interdisciplinary Laboratories for Advanced Materials Physics (I-LAMP), Università Cattolica, Italy
Istituto Nazionale di Fisica Nucleare (INFN), Pavia, Italy

Luca Celardo

Department of Mathematics and Physics, Università Cattolica, Italy
Interdisciplinary Laboratories for Advanced Materials Physics (I-LAMP), Università Cattolica, Italy
Istituto Nazionale di Fisica Nucleare (INFN), Pavia, Italy

Andrey Chabanov

Department of Physics, University of Texas, San Antonio, USA

Ulrich Kuhl

Laboratoire de Physique de la Matière Condensée (LPMC), University of Nice Sophia Antipolis, Nice, France

Felix Izrailev

Department of physics, Universidad Autónoma de Puebla, Puebla, Mexico
